

LAXMINT

Empowering the Future of Artisanal & Small Scale Gold Production

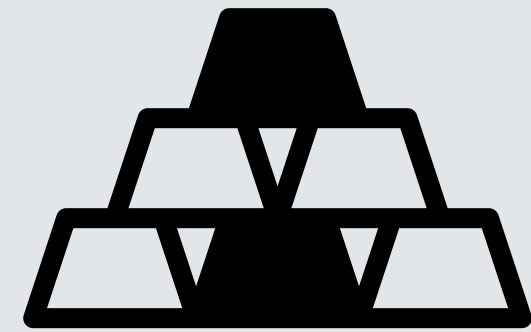

LAXMINT is building the digital infrastructure and standards to bring artisanal and small-scale gold mining into global relevance through certification, ethical production, and verifiable digital Real World Assets (RWAs).

Three Core Pillars

01

Finance Responsible
Production

We work with licensed mining operators to provide access to capital and tools that support environmentally conscious, safe, and scalable gold extraction, bringing structure to artisanal production.

02

Certify Asset
Valuation

Through partnerships with geological experts, we conduct formal certification of reserves using globally recognised standards, such as NI 43-101 and JORC, to establish trust and transparency from the ground up.

03

Develop Ethical
Digital Infrastructure

We build systems to transform certified gold into digital Real World Assets—verifiable, traceable, and structured for integration into regulated markets and supply chains.

LAXMINT is a blockchain-powered ecosystem

designed to bring transparency and structure to the gold sector connecting verified in-ground reserves, mined gold, and digital Real World Asset (RWA) representation.

The platform is built on
a three-token model

LAXMINT Utility Token

The LAXMINT token is the operational backbone of the platform. It is not a representation of gold or a financial security, but a pure utility token that powers access, governance, and functionality within the ecosystem

Digital Real World Asset (RWA) Representing Vaulted Gold (1:1 Backed)

Upon extraction, refinement, and secure storage, physical gold may be digitally represented through tokens that are backed 1:1 by audited gold held in certified vaults.

Digital Real World Asset (RWA) Representing Verified Gold Reserves

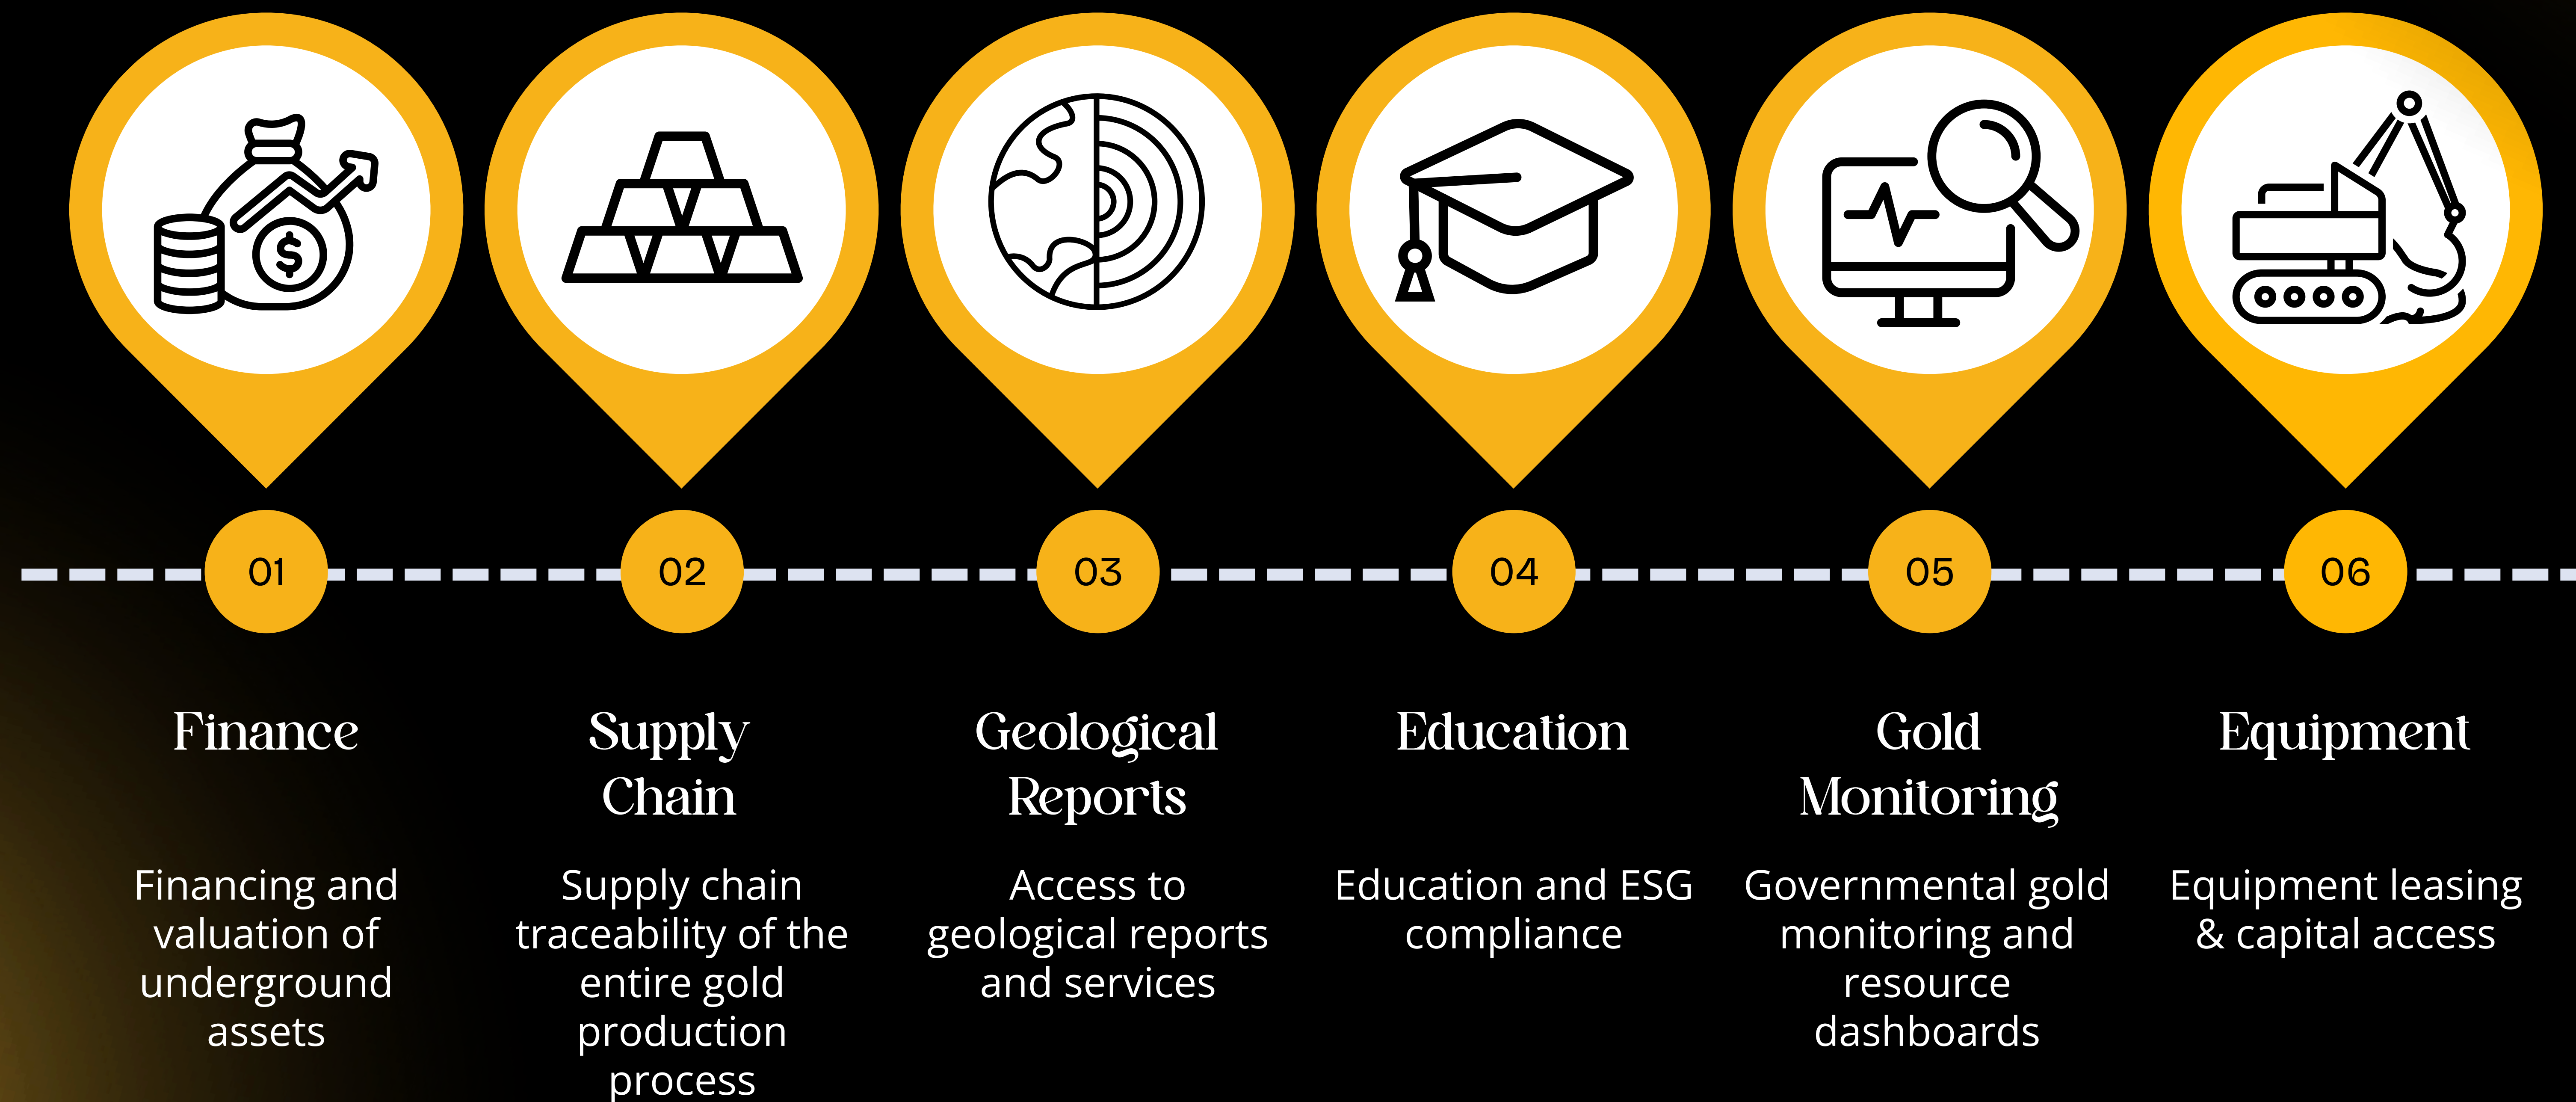

These assets are based on geological surveys conducted to internationally accepted standards and serve to provide structured visibility around the potential value of untapped reserves.

More Than a Product – A Scalable Ecosystem

LAXMINT is not just a digital token—it's the foundation for a self-sustaining ecosystem that can serve entire economies.

The ecosystem will support

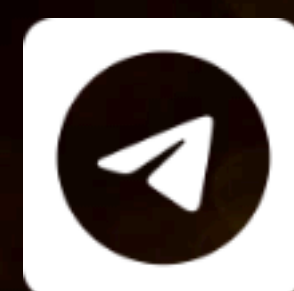

Be part of the ethical gold
mining revolution.
